Manual Therapy for the Lower Quarter - Lab Intensive

Course Description:

This entry level program is designed to expose participants to a broad range of readily applicable manual techniques to address common lower quarter musculoskeletal disorders. It also reviews current evidence for the administration of these techniques, as well as how they are most effectively incorporated in to a treatment regime and contraindications for their use. The course, which focuses upon articular mobilization techniques, is lab intensive and is designed to provide participants with a sound grasp of a wide range of techniques with high clinical utility.

Target audience: PT OT PTA COTA ATC SPT SOT

Instructional Level: Beginner

Course Objectives:

Describe the various proposed mechanisms behind the efficacy of manual techniques.

Describe indications and contraindications for articular mobilization in general and specific techniques in particular.

Describe current evidence supporting the use of manual therapy as it relates to disorders of the lower quarter.

Describe the scientific rational behind technique selection and how to optimize patient outcome using a manual therapy / exercise approach to treatment.

5. Demonstrate safe and effective application of manual therapy techniques as they pertain to common musculoskeletal disorders.
